Issues resolved

This section provides information on the following issues resolved in the latest FrameMaker (2015 release) Update 5.

1. Responsive HTML5 output is not optimized for Google search, which makes the output unsearchable.
(Ref - **4190911**)
2. If there are a large number of fonts (1800+) installed on the system, FrameMaker fails to apply correct fonts that appear lower down in the font list.
(Ref - **4052709**)
3. In some cases, if an SVG file contains open type fonts, it does not render correctly in FrameMaker and output PDF.
(Ref - **4109022**)
4. In Windows 10, FrameMaker crashes while embedding fonts in EPUB output.
(Ref - **4145336**)
5. Selecting the option *Use Only ASCII Characters in Generated Filenames* in Publishing Settings dialog does not work as expected.
(Ref - **4187889**)
6. Incorrect cross-reference being generated if the source type selected is paragraph.
(Ref - **4132389**)
7. FrameMaker console window displays publishing related error message on launch.
(Ref - **4175428**)
8. In some cases, generating a PDF document takes too long.
(Ref - **4177991**)
9. FrameMaker installer installs some unsupported software and OpenSSL files.
(Ref - **4184193**)

Issues resolved

10. Generating PDF output through FrameMaker Publishing Server fails if the file path is too long.
(Ref - **4185941**)
11. In some cases, if there are a large number of nested cross-references in a DITA map file, FrameMaker takes longer time to load the file.
(Ref - **4191901**)
12. Performance issue noticed while uploading files through CMS Connector for AEM.
(Ref - **4192529**)
13. While checking out files from AEM, cached dependent files on the local system are not refreshed even if updated files are available on the AEM server.
(Ref - **4192520**)
14. Resources dependency calculation should not be done while uploading a folder on AEM server hosting XML Add-on.
(Ref - **4192517**)
